

Be Counted, Be Safe!

You can utilize Statistics in Schools resources while participating in at-home learning! In case you missed it, we wanted to share more about our parent and caregiver toolkits, specifically designed to help make this time a little bit easier.

To help parents and caregivers support students with distance learning, the Statistics in Schools program has developed four toolkits that provide tips, best practices, and instruction on how to use and adapt our activities and resources for at-home use. Each toolkit describes two types of materials — **Quick and Easy Resources and Activities** — so parents and caregivers can easily choose those appropriate for their pre-k, elementary, middle, and high school children. The toolkits contain everything you need to get started, including a teaching guide, student worksheet, a list of materials, and an estimate of how long each lesson takes. The toolkits provide quick and easy resources, all of which can be easily taught using our prepared teaching guides. Each activity comes equipped with at-home tips to help make the lessons adaptable to the new learning environment. Whether you'd prefer to have something quick and simple that takes a short amount of time or a full activity, we have something available for you.
